Real hypersurfaces in complex two-plane Grassmannians with Reeb parallel Ricci tensor in the GTW connection

Juan de Dios Pérez, Hyunjin Lee, Young Jin Suh, and Changhwa Woo

Abstract. There are several kinds of classification problems for real hypersurfaces in complex two-plane Grassmannians $G_2(\mathbb{C}^{m+2})$. Among them, Suh classified Hopf hypersurfaces $M$ in $G_2(\mathbb{C}^{m+2})$ with Reeb parallel Ricci tensor in Levi-Civita connection. In this paper, we introduce the notion of generalized Tanaka-Webster (in shortly, GTW) Reeb parallel Ricci tensor for Hopf hypersurface $M$ in $G_2(\mathbb{C}^{m+2})$. Next, we give a complete classification of Hopf hypersurfaces in $G_2(\mathbb{C}^{m+2})$ with GTW Reeb parallel Ricci tensor.
